Research Interests

I develop evaluation methods for **multimodal and speech-enabled language models**. My work focuses on **diagnostic benchmark design**, auditory and temporal grounding, full-duplex voice-agent evaluation, and **data-efficient evaluation and inference** that preserve model-ranking fidelity at lower cost.

Keywords: multimodal and speech LLMs, benchmark design, full-duplex interaction, efficient evaluation

Research and Industry Experience

Upstage, AI Research Engineer Intern *Dec. 2025 – May 2026*

- Developed data-efficient VLM evaluation methods that preserve model rankings while substantially reducing benchmark scale, by analyzing benchmark redundancy and item informativeness.

Naver Cloud, AI Research Engineer Intern *Mar. 2023 – Sep. 2023*

- Conducted research on knowledge-enhanced multimodal named entity recognition (SCANNER, NAACL 2024) and implemented OCR post-processing components for document-AI pipelines.
